

Organi Green

A tour in the agricultural farm - Professional delegations

- Arrival, starting with coffee, tea and cold water.
- Gathering in our visitor's center - An introduction to our activities in the farm, modern sustainable organic agriculture, drip irrigation, explanation of agro-techniques implementation to improve yields and an overall view of Green 2000 Ltd. projects worldwide.
- A tour across our unique greenhouse which will demonstrate how modern sustainable organic agriculture looks in reality -Including different vegetables crops and growing methods.
- A tour in our modern aquaculture production unit - including an overview on how the systems work and what it takes to grow edible fish in fresh water tanks.
- In our nursery we will explain how a seed becomes a seedling - the practices of growing vegetable seedlings.
- In our goat milk farm, we will provide an overview on growing and milking goats and the working methods concerning this kind of production unit.
- A tour in our fruit-trees plantations and vineyard will include an introduction to different agro-techniques such as grafting, fertigation and acclimatizing hybrids to a specific area.
- In our free-range poultry we will discuss on this production unit in terms of efficiency, working methods and semi-automated feeding and eggs collection.
- In our way back to the starting point we will see a demonstration of a small vegetable production unit, common in developing countries. We will talk about how sources can be reused, the use in organic waste in electricity production and more.

*Currently in construction we have a goat milk products processing plant.

Price for a professional tour:

- * Minimum 800 NIS up to 15 visitors
- * Each additional visitor in the same group - additional 40 NIS
- * The price does not includes VAT
